OmniClass

The OmniClass Construction Classification System (known as OmniClass™ or OCCS) is a classification system for the construction industry. OmniClass is useful for many applications, from organizing library materials, product literature, and project information, to providing a classification structure for electronic databases. It incorporates other extant systems currently in use as the basis of many of its Tables - MasterFormat™ for work results, UniFormat for elements, and EPIC (Electronic Product Information Cooperation) for structuring products.

Uniclass (UK)

Introduction

[\(back to top\)](#)

The Uniclass2 Development Release Classification Tables are provided through the CPIC - the Construction Project Information Committee (www.cpic.org.uk), who are responsible for providing best practice guidance on the content, form and preparation of construction production information, and making sure this best practice is disseminated throughout the UK construction industry.

Uniclass2 Development Release Search Tool

[\(back to top\)](#)

This tool is a fully searchable, online version of the following ten Uniclass2 Development Release Classification tables (to find out how to use this tool see the [FAQ](#)):

1. Co - Complexes
2. Em - Entities
3. Ac - Activities
4. Sp - Spaces
5. EF - Entities by Form
6. Ee - Elements
7. Ss - Systems
8. Pr - Products
9. Zz - CAD
10. PP - Project Phases

A full PDF version of these eleven tables is available here: [2013-12-03_Uniclass2DevelopmentRelease.pdf](#)

Classification and Uniclass2

[\(back to top\)](#)

A classification system is an essential tool for organising information. Without an agreed, comprehensive system for organising construction information it will be impossible to ensure interoperability between different information systems, design tools, and facilities management tools.

CityGML : SIG > COURS 03

The screenshot shows the CityGML website homepage. At the top, there is a navigation menu with links for 'Historique', 'Signets', 'Fenêtre', and 'Aide'. Below the menu, the main header features the CityGML logo, the text 'Exchange and Storage of Virtual 3D City Models', and logos for 'OGC Member' and 'www.GeoInfra-Infrastruktur.de'. A secondary navigation bar includes 'News', 'About', 'Resources', 'Hyperlinks', and 'Contact'. The main content area is titled 'What is CityGML?' and contains several paragraphs of text describing the standard. At the bottom, it states 'Created and maintained by Thomas H. Kolbe' and 'Last update: 2012-04-24'.

What is CityGML? What is CityGML?

Features

Background

WHAT IS CityGML is a common information model and XML based encoding for the representation, storage, and exchange of virtual 3D city and landscape models. CityGML provides a standard model and mechanism for describing 3D objects with respect to their geometry, topology, semantics and appearance, and defines five different levels of detail. Included are also generalization hierarchies between thematic classes, aggregations, relations between objects, and spatial properties. CityGML is highly scalable and datasets can include different urban entities supporting the general trend toward modeling not only individual buildings but also whole sites, districts, cities, regions, and countries.

CityGML provides much more than 3D content for visualization by diverse applications. It allows users to share virtual 3D city and landscape models for sophisticated analysis and display tasks in application domains such as environmental simulations, energy demand estimations, city lifecycle management, urban facility management, real estate appraisal, disaster management, pedestrian navigation, robotics, urban data mining, and location based marketing.

CityGML has been implemented in many software solutions and is in use in many projects around the world. In National Spatial Data Infrastructure programs in the Netherlands, Germany, France, Malaysia, Abu Dhabi and other countries, CityGML provides an important platform for the transition from 2D to 3D data. It also plays an important role in bridging Urban Information Models with Building Information Models (BIM) to improve interoperability among information systems used in the design, construction, ownership and operation of buildings and capital projects.

CityGML is realized as an open data model is implemented as an application schema for the **Geography Markup Language 3 (GML 3)**, the extensible international standard for spatial data exchange issued by the **Open Geospatial Consortium (OGC)** and the **ISO/TC211**. Because CityGML is based on GML, it can be used with the whole family of GML compatible OGC web services for data accessing, processing, and cataloging like the **Web Feature Service**, **Web Processing Service**, and the **Catalog Service**. CityGML is an open standard that can be used free of charge.

The screenshot shows the esri Suisse website. The header includes the esri Suisse logo and navigation links for 'Secteurs', 'Produits', 'Services', 'Communauté SIG', and 'A propos de nous'. The main content area is titled 'Nouveautés' and features a sub-menu with 'Aperçu', 'Actualités', 'Newsletter', and 'Evénements'. The 'Actualités' section is active, displaying a news item from 16.04.2015 titled 'CityGML dans la plateforme ArcGIS'. The article text describes CityGML as an OGC standard for 3D city models and mentions that Esri now offers tools for importing and exporting CityGML data into ArcGIS. At the bottom, there is a video player titled 'Verdustfreie CityGML-Unterstützung in der ArcGIS-Plattform' showing a 3D city model in a software interface.

CityGML dans la plateforme ArcGIS

Visualiser des modèles de villes

Depuis 2008, CityGML est un standard de l'OGC pour l'enregistrement et la transmission de modèles de villes virtuels en 3D.

Esri met aujourd'hui à disposition de nouveaux outils CityGML, qui permettent l'importation et l'exportation de données sans perte pour les fichiers CityGML. Des modèles de villes détaillés peuvent ainsi être directement visualisés et analysés dans la **plateforme ArcGIS**. Ces outils sont disponibles au téléchargement sur **GitHub**, avec des données test et de nombreuses procédures de travail en 3D.

Pour obtenir un premier aperçu, visionnez la vidéo de 10 minutes « Support CityGML, sans perte dans la plateforme ArcGIS ».

Verdustfreie CityGML-Unterstützung in der ArcGIS-Plattform

LandXML.org in a Nutshell
Launched January 2000, LandXML.org is committed to providing a non-proprietary data standard (LandXML), driven by an industry consortium of partners. **There is no direct cost to join LandXML.org, nor specific level of participation required.** Once you join, stay informed and participate by using the LandXML discussion email list landxml@treehats.org.

News April 25, 2016

NEW BUILD OF FREE LANDXML VIEWER IS AVAILABLE

Build 2016.2 37958 of the [free Carlson P3D LandXML Viewer](#) and smaller [update install](#) is available. Volume Parcels, alignment, parcel and plan feature round tripping with colors, embedded 3D object auto texturing along with bug fixes of course. Minor changes have been posted to the [proposed](#) to support x,y,z scaling of 3D objects. New LandXML-2.0 samples files with polylines, coordinate 3D objects and multitextured surfaces are available on the [samples page](#).

FINALLY, A FREE LANDXML VIEWER IS AVAILABLE

After many years of requests by users for a free LandXML viewer, Carlson Software has provided a viewer that has some neat functionality like the ability to add textures to any LandXML file and up to 2.0 version file. Another great feature generates 3D image thumbnails automatically in Windows Explorer so you can see what the file looks like before opening it. It can also be used as a visualization tool since it can open OBJ and Sketchup files. [download it now](#) and [watch the Introduction Video Here](#)

CHANGES FOR LANDXML-2.0 POSTED JANUARY 19, 2016

New LandXML-2.0 samples files are now available on the [samples page](#). The following changes to the [proposed LandXML 2.0 schema](#):

- Added multi-color and multi-texture support for Surfaces
- All required texture images are embedded in LandXML file for maximum portability
- Added embedded 2D/3D symbols for CgPoints as encoded DXF
- Added a MaterialTable with display and materials attributes for any CoordGeom, CGPoints surface faces elements. This works for any elements derived from <CoordGeom> and <P>
- Added a road design cross section template table.
- Added Pond definition to PipeNetworks => Struct element.
- Added Channel definition type to PipeNetworks => Pipe element.
- Adoption of XML digital signature for signing and sealing LandXML instance content.

AR: modèle BEM

Révision modèle énergétique - Blocs thermiques

Blocs thermiques Structures Ouvertures

- 001 Gaine
- 002 WC
- 003 Classe
- 004 Ascenseur
- 005 Escaliers
- 006 Hall
- 007 Service
- 008 Soit

Propriétés bloc thermique

003 Classe Carte de classe

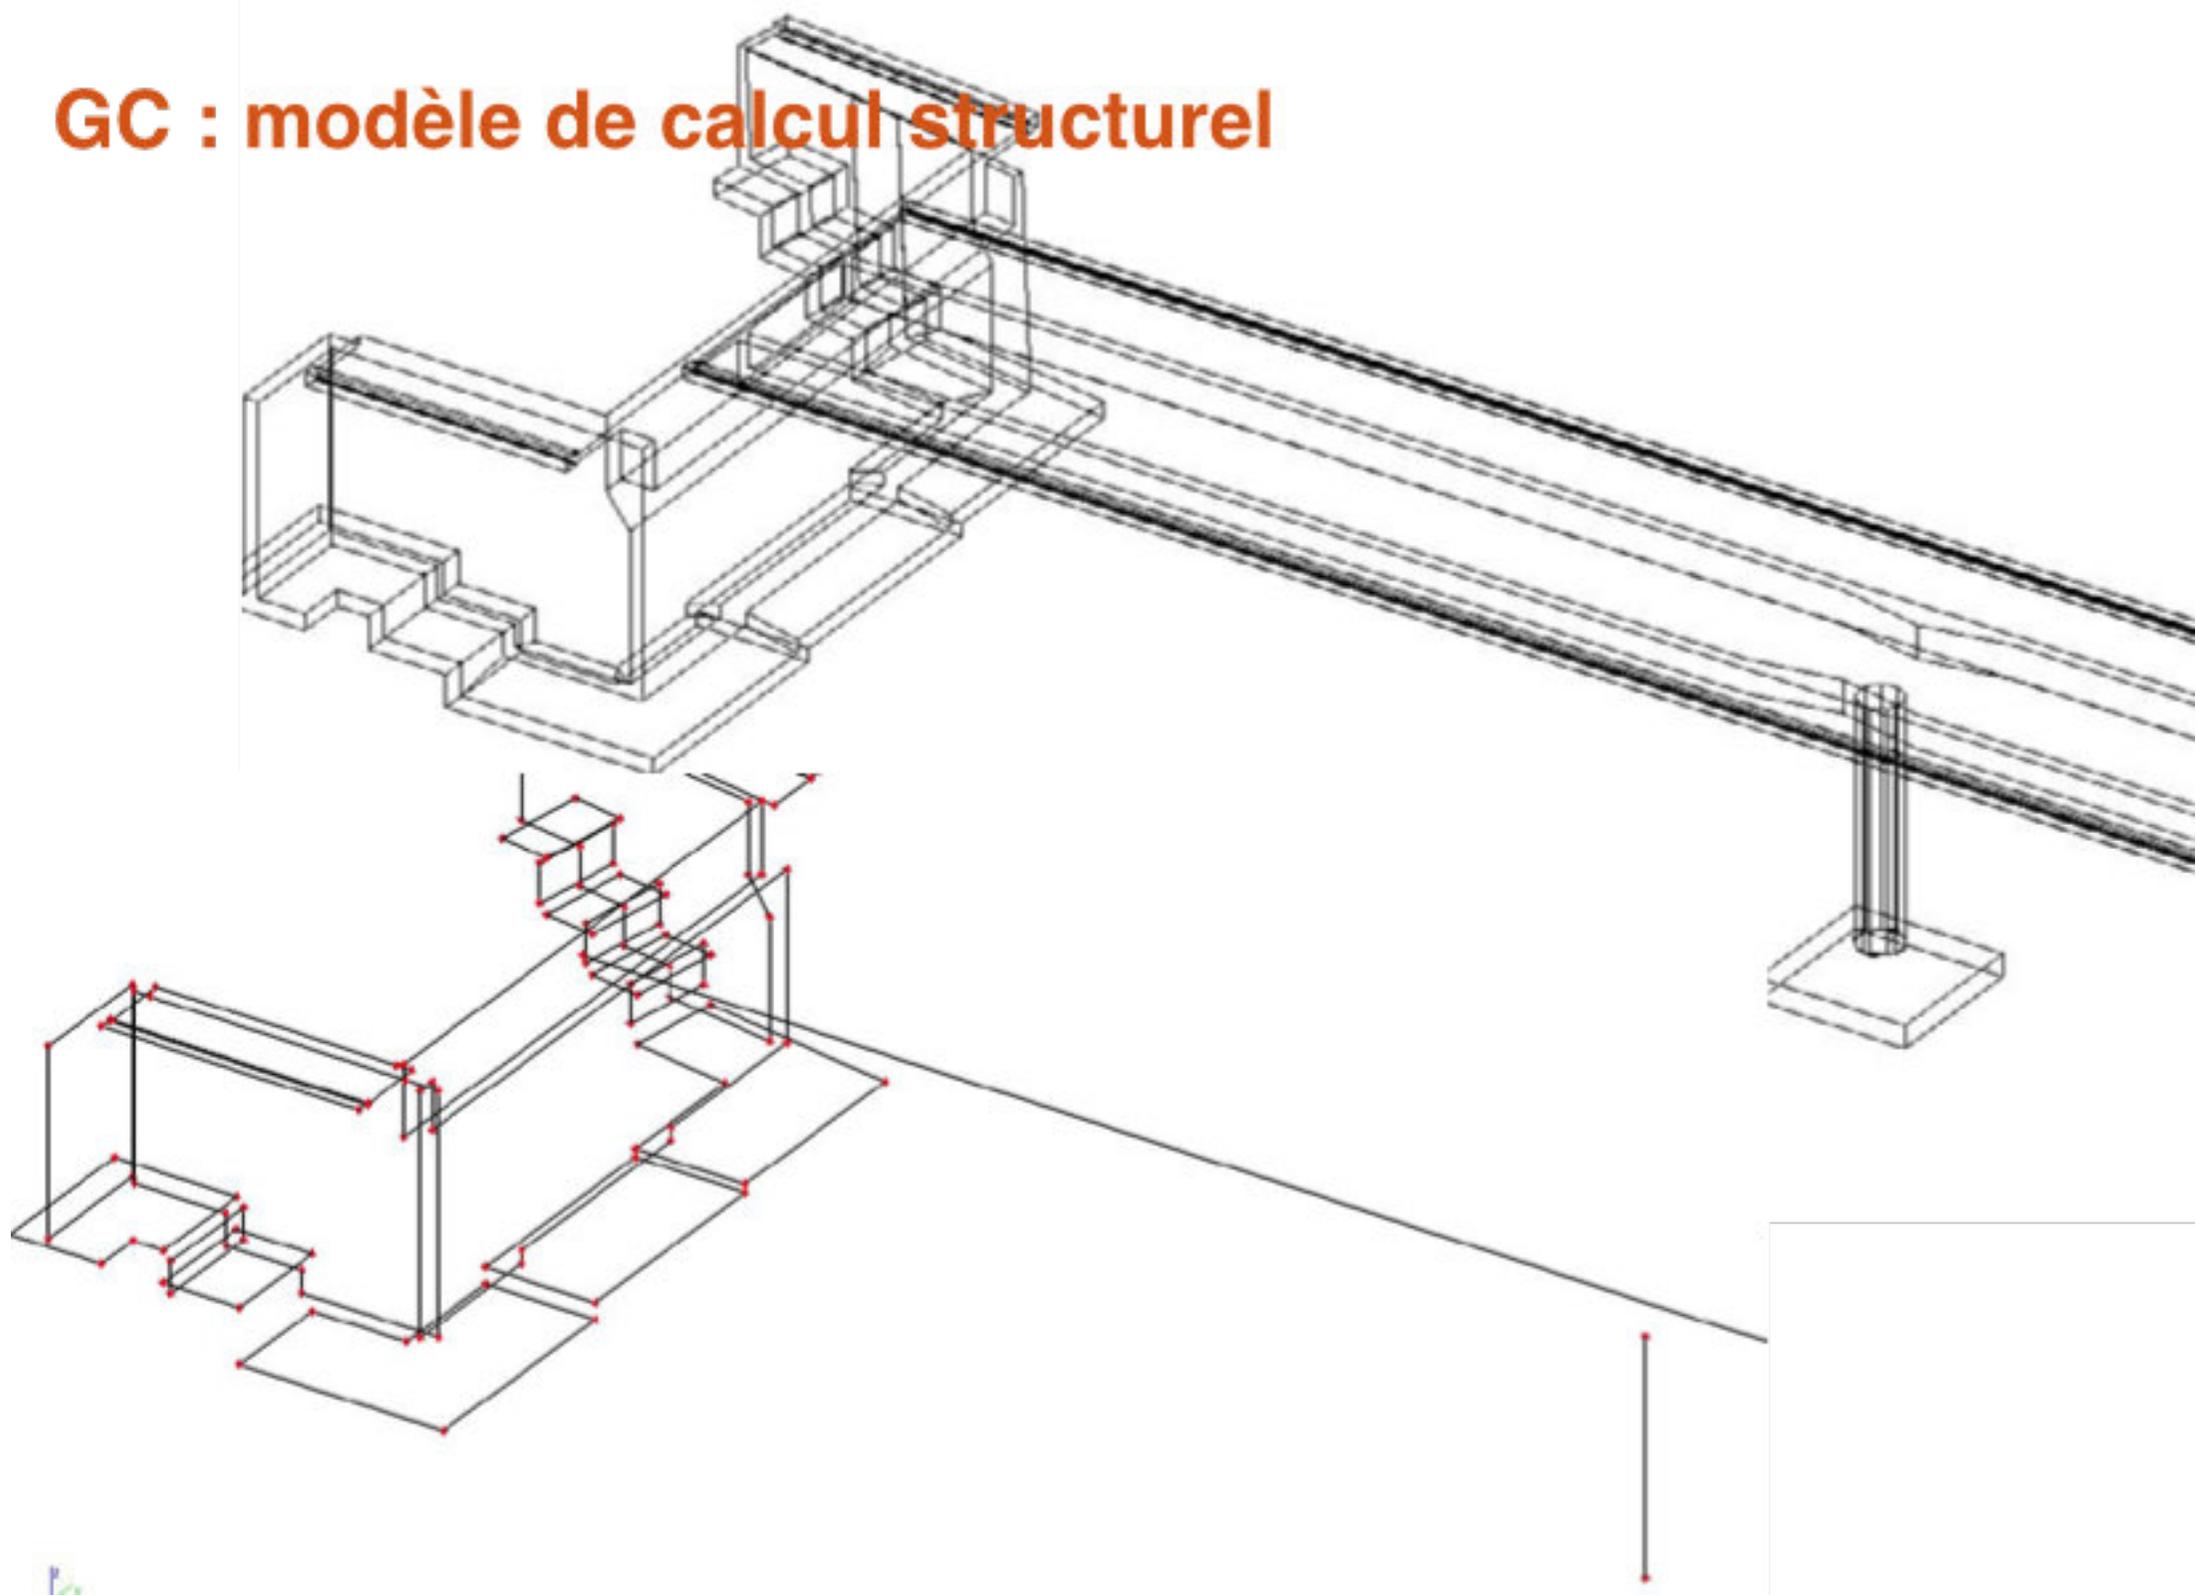

Systèmes MEP d'alimentation

Type de système	Nom de système
1 Chauffage	Chauffage collectif
2 Ventilation	Apport d'air frais

Etat de partage

Lancer Simulation énergétique

GC : modèle de calcul structurel

GC : modèle ferrailage associatif (essai)

7. VOS CONNAISSANCES EN CAO?

RECENT ACTIVITY

COURS 01

LES OUTILS DE LA 4^e REVOLUTION INDUSTRIELLE -EPFL VDI-BIM-

- Présentation de l'équipe du cours AR-484
- Les outils de l'ingénieur et de l'architecte
- L'openBIM
- Les principaux logiciels BIM Arch. & GC : Allplan Engineering, Revit, ARCHICAD.
- Présentation du cours
- e-learning pour logiciels BIM
- Présentation de l'EPFL VDI-BIM, des ENAC BIMservers
- Installation de vWorkspace (accès à l'EPFL VDI-BIM)

MOODLE AR-484 : sondage > délai 21.09.17 à 23:00

Architecture (AR) > Master > AR-484 > General > Vos connaissances BIM / DAO

Avez-vous déjà modélisé ("dessiné") un projet avec un des logiciels suivants (plusieurs réponses possible):

- Logiciel BIM: ARCHICAD
- Logiciel BIM: Allplan Engineering
- Logiciel BIM: Revit architecture
- Logiciel BIM: Revit structure
- Logiciel de DAO: Vectorworks
- Logiciel de modélisation: Rhinoceros
- Logiciel de DAO: AutoCad
- Autre logiciel 3D
- Autre autre logiciel 2D
